

## AMENDMENTS TO THE CLAIMS

Please amend the claims so that they read as-follows:

---

1. (Currently Amended) An endless flexible single layer positively charged organic photosensitive body, comprising:

a photosensitive layer, said photosensitive layer including a charge generating agent, a hole transport agent, an electron transport agent, and a resin binder;

a conductive flexible support body;

said photosensitive layer being formed on top of said flexible support body to form a belt-type photosensitive body;

said charge generating agent comprises titanyl phthalocyanine;

and said resin binder comprises a polycarbonate resin.

---

2. (Original) An endless flexible single layer positively charged organic photosensitive body as described in Claim 1, wherein:

said polycarbonate resin has at least one of (a) a viscosity average molecular weight of 20,000 or greater and (b) a weight ratio of said polycarbonate resin in said photosensitive layer is 40 % or greater and 70% or less.

---

3. (Currently Amended) An endless flexible single layer positively charged organic photosensitive body as described in Claim 1, wherein:

said polycarbonate resin is a bisphenol Z ~~type~~ polycarbonate resin.

4. (Currently Amended) An endless flexible single layer positively charged organic photosensitive body as described in Claim 2, wherein:

said polycarbonate resin is a bisphenol Z type polycarbonate resin.

---

5. (Original) An image forming device, comprising:

an endless flexible single layer positively charged organic photosensitive body as described in Claim 1, that is stretched over a plurality of cylindrical rollers that include at least one cylindrical roller with an outer diameter of 5 mm phi or greater and 20 mm phi or less;

and means for electrophotography processing that are placed on the periphery of said photosensitive body.

6. (Original) An image forming device, comprising:

an endless flexible single layer positively charged organic photosensitive body as described in Claim 1 that is stretched with a tension of 50 N/cm per unit length of the width of said photosensitive body and is stretched over a plurality of cylindrical rollers that include at least one cylindrical roller with an outer diameter of 5 mm phi or greater and 20 mm phi or less;

and means for electrophotography processing that are placed on the periphery of said photosensitive body.

7. (Original) An image forming device as described in Claim 5, wherein:

said image forming device is a device selected from a printer, copier, fax machine, and printing press that are capable of color output by an electrophotography method.

8. (New) An endless flexible single layer positively charged organic photosensitive body, comprising:

a photosensitive layer, said photosensitive layer including a charge generating agent, a hole transport agent, an electron transport agent, and a resin binder;

a flexible support body, having a conductive layer formed thereon;

said photosensitive layer being formed on top of said flexible support body to form a belt-type photosensitive body;

said charge generating agent comprises titanyl phthalocyanine;

and said resin binder comprises a polycarbonate resin.

9. (New) An endless flexible single layer positively charged organic photosensitive body as described in Claim 8, wherein:

said polycarbonate resin has at least one of (a) a viscosity average molecular weight of 20,000 or greater and (b) a weight ratio of said polycarbonate resin in said photosensitive layer is 40 % or greater and 70% or less.

10. (New) An endless flexible single layer positively charged organic photosensitive body as described in Claim 8, wherein:

said polycarbonate resin is a bisphenol Z polycarbonate resin.

11. (New) An endless flexible single layer positively charged organic photosensitive body as described in Claim 9, wherein:

said polycarbonate resin is a bisphenol Z polycarbonate resin.

12. (New) An image forming device, comprising:

an endless flexible single layer positively charged organic photosensitive body as described in Claim 8, that is stretched over a plurality of cylindrical rollers that include at least one cylindrical roller with an outer diameter of 5 mm phi or greater and 20 mm phi or less;

and means for electrophotography processing that are placed on the periphery of said photosensitive body.

13. (New) An image forming device, comprising:

an endless flexible single layer positively charged organic photosensitive body as described in Claim 8 that is stretched with a tension of 50 N/cm per unit length of the width of said photosensitive body and is stretched over a plurality of cylindrical rollers that include at least one cylindrical roller with an outer diameter of 5 mm phi or greater and 20 mm phi or less;

and means for electrophotography processing that are placed on the periphery of said photosensitive body.

14. (New) An image forming device as described in Claim 12, wherein:

said image forming device is a device selected from a printer, copier, fax machine, and printing press that are capable of color output by an electrophotography method.
